

Solution

Do not look at this solution, until you have tried to do the exercise by yourself!

Unset

```
#!/bin/bash

factorial() {
    num=$1
    if [[ $num -lt 0 ]]; then
        echo "Invalid input. "
        return
    fi
    result=1
    for ((i=2; i<=num; i++)); do
        result=$((result * i))
    done
    echo $result
}

while true; do
    read -p "(Press ctrl+c to stop) Enter a non-negative integer: " num
    result=$(factorial $num)
    echo "The factorial of $num is $result"
done
```
